ASSOCIATE PRODUCT MANAGER ASSIGNMENT

GCC Portal

One trusted view of India's Global Capability Centre ecosystem

Company | Consultant | Real estate | Government

Himanshu Chatterjee · Live prototype: gcc-portal.himanshu-etc1.workers.dev

THE PROBLEM

India's GCC ecosystem has no single source of truth

PROBLEM STATEMENT

India has 2,000+ GCCs and a long chain of players around them, but the data about the ecosystem is scattered and cannot be verified. A company entering India cannot tell what is true, so it relies on referrals.

Numbers disagree

About 1,700 GCCs by one count, 2,900+ units by another. Bengaluru: 487 or 880+.

Data is scattered

Spread across government filings, press releases, consultant reports and people's heads.

Quality can't be checked

Nobody can tell which providers deliver and which only market well.

Counts: Vestian (Jul 2025), NASSCOM units via CBRE, Zinnov (2025).

WHO IS INVOLVED

Many players, each missing a different piece

Player	What they need to know	Where it hurts today
Company entering India	Which city, which providers, what it costs	No neutral source, so it relies on referrals
Advisors, lawyers, auditors	Which companies are coming next	Leads come from networks, not data
Real estate firms	Where clusters form, who needs space	Demand shows up only when a lease is near
Recruiters, payroll and EOR	Which centres are about to hire	Cannot prove past delivery
State governments	How their incentives compare, who is scouting	Compete without seeing the competition

WHAT EACH PLAYER WANTS

Everyone wants data, but not the same data

Player	What they most want to know
Company entering India	Which city, which providers, and what it costs
Advisors	Which GCCs are coming next
Real estate firms	Where clusters form, and who needs space
Recruiters, payroll, EOR	Who is about to hire, and what talent costs
State governments	How their incentives compare, and who is scouting

So the answer is not one dashboard for all. It is one source of truth, sliced differently for each player.

WHAT THEY DO TODAY

The data sits in four places, and none can be checked

Where it sits	What it gives	Why it fails
Government filings	Official facts	Hard to find, not joined up
Press releases	Announcements	Promotional, rarely followed up
Consultant reports	Market numbers	Paid, and they disagree
People's heads	Real experience	Cannot be searched or verified

HOW MUCH IT HURTS, ONE EXAMPLE

A 400-seat centre pays about ₹4.2 crore a year in rent. A wrong city or building locks that in for years.

Illustration: 400 seats × 100 sq ft × ₹88 per sq ft per month (national average, ANAROCK H1 2025). Rent only.

THE OPPORTUNITIES

Six opportunities in one gap

1

Verified provider track record

See who has actually delivered, not just who markets well.

2

City decision tool

Compare cities on what matters to your centre.

3

State incentive benchmark

Every state's GCC policy side by side.

4

Lead radar for advisors

Spot companies about to set up before competitors do.

5

Demand map for real estate

See where clusters form and who needs space.

6

One reconciled market view

Show where reports disagree, and why.

WHAT MATTERS MOST: RICE

Start with the three that score highest, plus trust

Opportunity	Reach	Impact	Confidence	Effort	RICE
One reconciled market view	9	2	80%	2	7.2
City decision tool	8	2	80%	2	6.4
State incentive benchmark	5	1	80%	1	4.0
Verified provider record	8	3	50%	4	3.0
Lead radar for advisors	3	2	50%	3	1.0
Demand map for real estate	3	1	50%	3	0.5

The MVP is the top three, plus identity verification so every user is real. Provider track record has the highest impact but needs verified users to confirm it, so it comes next.

RICE = Reach × Impact × Confidence ÷ Effort. Reach 1 to 10, Impact 0.25 to 3, Effort in person-months. Estimates, to be validated.

THE SOLUTION

One verified, sourced portal with a door for each player

1 Sources

Filings, press, reports, client-confirmed work

2 Reconcile

Every number shows source and date; conflicts are shown

3 Verify

Choose who you are, prove organisation and authority

4 Serve and connect

A dashboard per role, and Connect to reach each other

Company

Set-up plan, city finder, incentives, rent estimate

Consultant

Leads, market view, competition, policy watch

Real estate

India cluster map, demand, leasing benchmarks

Government

State benchmark, policy detail, who is scouting

WHO FIRST

Start with companies entering India

Why them

- They hurt most: the biggest decisions, the weakest information
- They are the demand. Advisors, landlords and states follow them
- Their first questions use public data we can get now

MVP scope

- One reconciled market view, with sources
- City finder and a guided set-up plan
- State incentive benchmark
- Verification, so every user is real

POSITIONING

The verified, sourced view of India's GCC market

For anyone dealing with a GCC set-up in India, **who** needs data they can trust, **GCC Portal is** a verified market data platform **that** shows every number with its source and every organisation verified. **Unlike** referrals and paid reports, you can check it, and reach the right party in one tap.

Player	Uses today	Why they come to us instead
Company	Referrals, paid reports	One neutral view, with providers they can verify
Advisor	Network, cold calls	Leads in their markets, seen before competitors
Real estate	Brokers, news	Demand signals before a lease is near
Government	Ad hoc outreach	Incentives compared, and who is scouting

SUCCESS METRICS

One North Star, supported by inputs and guardrails

Mission: keep the GCC market organised, with legit information and verified connections for the whole community.

NORTH STAR METRIC

Verified connections per month: introductions between two verified organisations that get a reply

It shows the mission working: people trust the information enough to reach out, and the other side is real enough to reply.

INPUT METRICS

- Acquisition: new verified organisations, on both sides
- Activation: share sending a first introduction within 14 days
- Engagement: users who view sourced data before they connect
- Retention: week-4 returning users
- Marketplace: reply rate within 48 hours

GUARDRAIL METRICS

- Data trust: figures with a source and date (target 100%), error reports per 1,000 views
- Verification quality: false-verification rate, time to verify
- Spam and abuse: requests reported or blocked per 1,000
- Experience: onboarding drop-off

THE PROTOTYPE

It works. Try it now.

What is built

- Real sign-in, with one role dropdown
- Choose who you are, then prove your organisation and authority
- Short onboarding, then a dashboard per role
- A guided set-up plan for companies
- State policies with key points and sources
- An India cluster map and rent benchmarks
- Connect: introductions, email or their page

Open it

gcc-portal.himanshu-etc1.workers.dev

Choose a role and continue, or use "Preview this portal without signing in" to see a dashboard at once.

Honest limits: document checks are simulated, rent figures are published benchmarks (not live), and companies, providers and enquiries are sample data, labelled as such.

ROADMAP AND RISKS

Earn trust first, then widen

Phase 1: Launch

First 3 months

The MVP for companies: market view, city finder, set-up plan, state benchmark, and verification. Three cities.

Risk: wrong data. Show sources and dates, and flag conflicts.

Phase 2: Build trust

Once we have verified users

Provider track record confirmed by clients, official registry checks, and more cities.

Risk: cold start. Seed with public data and start with companies.

Phase 3: Grow

Once both sides are active

Lead radar, demand map, talent and cost data, and paid plans for advisors, landlords and governments.

Risk: fake users. Document proofs now, registry lookups next.
